A Message of Good Will

From the Martin-Pratt Seed Co.

To Our Florist and Nurseryman Friends:

For 1938 we wish you a year both of personal happiness and of real good prosperous business. May we all give our best efforts to that end.

We are sending you this catalog believing that you will find it an excellent list from which to purchase your seed requirements. For we are providing through this catalog seeds of the very finest quality to be obtained, and at entirely reasonable and fair prices.

Although our costs of all most every kind have advanced during the past months, we have not, in the average, advanced our prices, realizing that our customers are not in a position to pay more than is absolutely necessary for the seeds that are really the first step in the making of a crop. We have again carefully checked our list of varieties, adding many worth while new strains, and eliminating others that are losing in popularity. Of some varieties there was clearly not enough seed harvested to fully supply the demand, so we urge placing your order just as soon as you possibly can.

We sincerely appreciate the business you have given us in the past and assure you of our continued efforts to please you.

THE MARTIN-PRATT SEED CO.

Success

With Our Seeds Is Assured Because---

1. Our original sources of supply are very carefully selected for extra value, not price. We pay premiums for real fine selections.
2. We carry on germination tests the year around in our own greenhouses and outdoor frames.
3. We conduct adequate type tests in our trial grounds and general nursery.
4. Every order is handled personally by a financially responsible member of our company.

The above snapshots were taken in our Trial Grounds.
We welcome all visitors who are interested in checking and comparing varieties.

Delphiniums

Our years of experience as Nurserymen are of great value in the selection of the finest strains of Delphinium. You can benefit by that experience. Select your seed from this listing.

Delphinium, B. & L. Hybrids

The Belladonna Type

The plants of the Belladonna type, including Belladonna, Bellamosum and Lamartine produce loose graceful spikes which are in many cases better adapted to floral work than the heavier formal spikes of the Elatum Hybridum type such as Blackmore and Langdons and Wrexham.

Belladonna Improved Cliveden Beauty

A carefully selected strain, which we can highly recommend. It is the finest light blue for forcing or outdoor growing. $\frac{1}{8}$ oz. 30c, $\frac{1}{4}$ oz. 50c, oz. \$1.60. We can supply our special strain in any quantity. If interested write for our prices by the quarter pound and pound.

Belladonna. Standard strain. Mostly light blue, some of darker shades. $\frac{1}{8}$ oz. 25c, $\frac{1}{4}$ oz. 40c, oz. \$1.30.

Lamartine. It is a deeper shade than Bellamosum and has a distinct white eye. In color it is more like the old Formosum but is a much better grower and has better foliage and is not so susceptible to disease. $\frac{1}{8}$ oz. 40c, $\frac{1}{4}$ oz. 70c, $\frac{1}{4}$ oz. \$1.20, oz. \$1.50.

Summer Cloud — White

After further trial we are inclined to call Summer Cloud a really better white Delphinium than Iceberg. Produces fine clear spikes for cutting or for contrast with the blues in the garden. Comes very true from seed. $\frac{1}{8}$ oz. 35c, $\frac{1}{4}$ oz. 60c, $\frac{1}{4}$ oz. \$1.00, oz. \$3.60.

Blackmore and Langdon's Hybrids Prize Strain—Originator's Seed

This is unquestionably one of the finest strains of Delphinium Hybrids to be had in the world today. Mr. Martin was one of the first in this country to import this strain and did much to familiarize the American trade with its many good qualities and beauty. Annually we import a quantity of seed direct from Messrs. Blackmore and Langdon. This seed is taken from the prize plants in their gardens. Their plants, year after year, win the highest awards in English and Continental Exhibits. $\frac{1}{8}$ oz. 50c, $\frac{1}{4}$ oz. \$1.00, $\frac{1}{4}$ oz. \$1.75, oz. \$6.00.

Blackmore and Langdons, Martin's Stock.

This seed is one generation removed from the original Blackmore and Langdon's seed. We have been very careful in selecting seed from the best plants and we know from past experience that the result is very good indeed. $\frac{1}{8}$ oz. 45c, $\frac{1}{4}$ oz. 80c, oz. \$2.50, $\frac{1}{4}$ lb. \$8.00.

Giant Pacific Strain (V & R) Delphiniums

A boon to Florists and Nurserymen
The hybridizer of this strain had as his aim much more than tremendous height and size of spike. He has produced large flowers, but properly proportioned to the size of the spike to maintain proper balance and gracefulness of the plant. The stems of this strain are wiry, strong enough to resist high winds, and while it is not 100% mildew resistant, mildew resistant plants do predominate. Under good conditions your seedlings should produce beautifully proportioned spikes 3 to 5 feet in height with only 1 to 2 feet of foliage.

The individual flowers are large, 2 to 3 inches in diameter of beautiful shadings and of good form and substances. Many are double, some semi-double and single. We strongly recommend the Giant Pacific strain both to the grower of plants to sell and the grower of flowers for cutting. **Pacific Hybrids, All Shades Mixed. Light Blue and Lavender Shades. Dark Blue and Violet Shades.** Any above—Tr. Pkt. \$1.00, $\frac{1}{4}$ oz. \$2.00, $\frac{1}{4}$ oz. \$3.50, oz. \$12.00. **Pacific Clear White, extra fine. Tr. Pkt. \$1.00.**

They are the kinds most in demand in the cut-flower markets.

Our bulbs are carefully grown in the right kind of soil. They are well cured, clean and high crowned, young stock, free from disease and thrip.

The planting season for forcing Gladiolus is from January 10th or 15th to March 1st. Cold frame planting may be done from March 1st to April 1st. Outdoor planting may be made from the time that frost danger is past in your section to as late as July 10th.

Points on Gladiolus Forcing

Use good quality well cured bulbs. The No. 1 size gives best results, producing good spikes a few days earlier than smaller sizes. It is seldom profitable to plant before January 15th. Earlier plantings bloom no earlier and come a larger percentage blind.

Plantings made in late January and early February usually flower in 110 to 120 days. March 1st plantings of some varieties will flower in 90 to 100 days. Grow varieties that are recommended for greenhouse culture. Not all varieties are good for forcing.

Gladiolus may be planted in pots, raised benches or ground beds. There should be plenty of depth to the soil if the benches are used. Avoid soil too high in nitrogen. Soil that is good for Carnations is good for Gladiolus. Cover the bulbs with 2½ inches to 3 inches of soil and keep well supplied with moisture.

A 50 degree F. temperature is best for starting the bulbs. This may run up to 58 or 60 degrees F. during sunny days.
